

Voluntary CEA Data Release	
Project Name	Mulgaroon Forest Regeneration Project
Project ID	EOP101101
Project Proponent	Jean-Luc Schmitt and Anne-Marie Schmitt
Method	Carbon Credits (Carbon Farming Initiative) (Human-Induced Regeneration of a Permanent Even-Aged Native Forest - 1.1) Methodology Determination 2013 c3
Method URL	https://www.legislation.gov.au/Details/F2018C00125
Project Area	21,706 ha as of 20 October 2022
CEA area	8,891 ha as of 20 October 2022
CEA Map	 <p>5 km</p>
Date Project Registered	7 April 2015
Start Project Crediting Period	1 January 2013
Model Commencement Date (if applicable)	1 January 2009
Carbon abatement model (if applicable)	FullCAM 2020

Voluntary CEA Data Release	
Key Modelling Parameters (if applicable)	No additional modelling parameters.
Data sources	<ul style="list-style-type: none"> - CEA is defined through a project specific supervised classification process using the Random Forest algorithm and machine learning processes with both open-source and commercial GIS software (QGIS, ArcGIS, Manifold). - NCAS, Sentinel-2 mosaic/s, disturbances identified through sources such as SLATS, NAFI and manual exclusions, management history, stocking data, state cadastre, land titles - On-site waypoint collection
Baseline scenario	<ul style="list-style-type: none"> - Livestock - Feral animals - Mechanical or chemical destruction, or suppression, of regrowth
Management changes associated with the carbon project	<ul style="list-style-type: none"> - Management of the timing, and the extent, of grazing - Management, in a humane manner, of feral animals - Implementation of a decision to permanently cease the mechanical or chemical destruction, or suppression, of regrowth
