

Voluntary CEA Data Release	
Project Name	Wapweelah Regeneration Project
Project ID	ERF101517
Project Proponent	Phillip Hugh Ridge
Method	Carbon Credits (Carbon Farming Initiative) (Human-Induced Regeneration of a Permanent Even-Aged Native Forest - 1.1) Methodology Determination 2013 c1
Method URL	https://www.legislation.gov.au/Details/F2015C00576
Project Area	24,800 ha as of 17 February 2023
CEA area	18,764 ha as of 17 February 2023
CEA Map	 <p>The map displays the project area with three distinct regions: Exclusion (grey), Baseline forest (green), and CEA (light blue). The CEA area is the largest, covering most of the project's footprint. The Baseline forest is located in several smaller patches, primarily along the southern and eastern edges. Exclusion areas are scattered throughout the project area. A scale bar indicates 4 km, and an inset map in the top left corner shows the project's location within a larger geographical context.</p>
Date Project Registered	18 August 2015
Start Project Crediting Period	23 March 2012
Model Commencement Date (if applicable)	1 January 2010
Carbon abatement model (if applicable)	RMT

Voluntary CEA Data Release	
Key Modelling Parameters (if applicable)	Weed control at MCD: off
Data sources	<ul style="list-style-type: none"> - CEA is defined through a project specific supervised classification process using the Random Forest algorithm and machine learning processes with both open-source and commercial GIS software (QGIS, ArcGIS, Manifold). - NCAS, Sentinel-2 mosaic/s, disturbances identified through sources such as SLATS, NAFI and manual exclusions, management history, stocking data, state cadastre, land titles - On-site waypoint collection
Baseline scenario	- Livestock, feral animals
Management changes associated with the carbon project	<ul style="list-style-type: none"> - Management of the timing, and the extent, of grazing - Management, in a humane manner, of feral animals
