Voluntary CEA Data Release	
Key Modelling Parameters (if applicable)	Growth pauses before project start: 3
Data sources	- CEA is defined through a project specific supervised classification process using the Random Forest algorithm and machine learning processes with both open-source and commercial GIS software (QGIS, ArcGIS, Manifold). - NCAS, Sentinel-2 mosaic/s, disturbances identified through sources such as SLATS, NAFI and manual exclusions, management history, stocking data, state cadastre, land titles - UAV-sourced orthomosaic image, on-site photographs
Baseline scenario	- Livestock - Feral animals
Management changes associated with the carbon project	- Management of the timing, and the extent, of grazing - Management, in a humane manner, of feral animals - Implementation of a decision to permanently cease the mechanical or chemical destruction, or suppression, of regrowth
